

3 AGENTS IN 30 DAYS

AGENTIC CATALYST

Agentic Catalyst builds and validates production-ready AI agents designed for your live workflows in 30 days, delivering measurable ROI quickly, with architecture, governance, and a scaling roadmap included.

THE PROBLEM

Only 4 of 33 AI proof-of-concept projects reach production. Organizations that moved from AI pilots to production agents achieved 1.5x higher revenue growth and 1.6x greater shareholder returns over three years. The ones still running pilots did not.

WHAT YOU GET

Not a workshop. Not a proof-of-concept. In 30 days, your team has three AI agents ready to run in production, built around your data and workflows.

- ✓ Rapid assessment of data and technology ecosystem readiness
- ✓ Three AI agents designed for one of your use cases
- ✓ Integration into your existing systems and business processes
- ✓ Security, compliance, and monitoring layers built into each agent
- ✓ Governance-ready rollout plan for enterprise-wide deployment
- ✓ High-level business case with value realization metrics

DELIVERABLES

At the end of 30 days, you receive:

PRODUCTION-READY AI AGENTS

Three functional, production-ready agents built for your selected use case.

BUSINESS CASE FOR SCALING

A structured case for expanding agentic capabilities across the enterprise, based on real performance data.

TARGET ARCHITECTURE

A long-term architecture vision with defined next steps for enterprise-scale implementation.

ROADMAP TO PRODUCTION

A practical plan for taking your first three agents across teams, functions, and workflows.

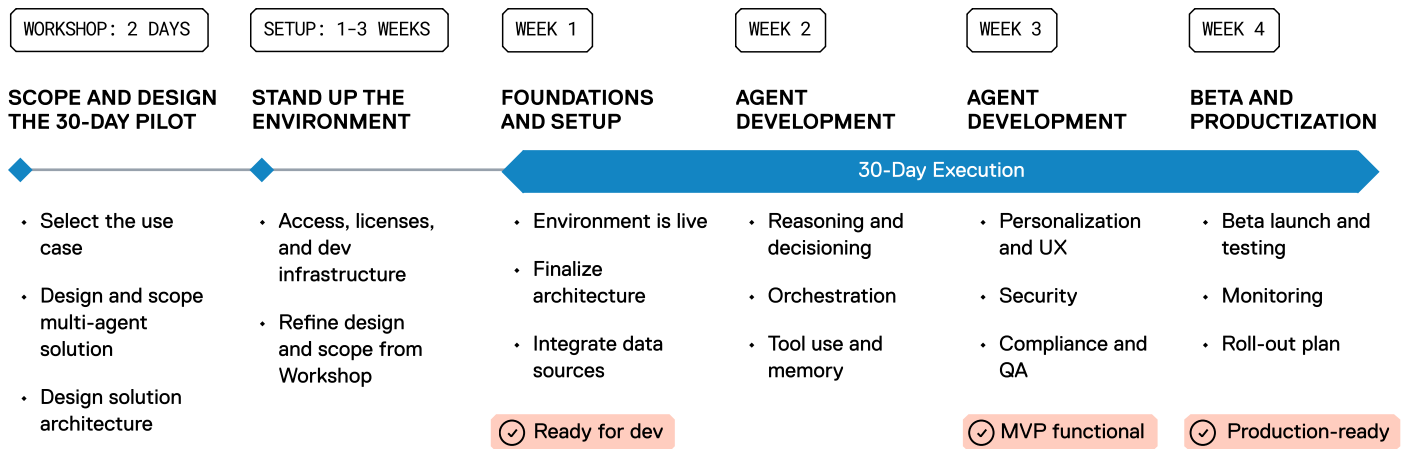

FOUNDATION FOR ENTERPRISE ADOPTION

Governance, an operating model, and integration approach you need to operationalize and scale agents beyond the initial 30 days.

HOW IT WORKS

WHY IT WORKS

Ninety-eight percent of leaders expect faster movement from pilot to production over the next two years, projecting an average speed increase of 37%. Agentic Catalyst is how you get to the front of that number.

 Outcome-driven from day one, not experimental	 Agents connected across your ecosystem, not siloed by use case
 Built around your workflows, not a generic template	 Architecture designed to scale, not just to demonstrate

PATH TO AN AUTONOMOUS ENTERPRISE

Prove AI value with Catalyst	Establish Blueprint with Amplifier	Scale impact with AI Hub	Run Autonomous enterprise with AI TOM
30 DAYS	3 TO 6 MONTHS	6 TO 18 MONTHS	ONGOING
CATALYST	AMPLIFIER	ENTERPRISE AI HUB	AI TOM
Identify your high-value workflow, prove it with one production-ready multi-agent solution, capture the architecture, business case, and readiness your organization needs before scaling.	Take that validated use case end-to-end into production, stand up the platform, data, and governance foundations, and define how your organization will adopt and prioritize agentic work.	Run a repeatable delivery factory that ships proven agents across functions in parallel, reusing shared components and continuous governance so each new process costs less than the last.	Run a repeatable delivery factory that ships proven agents across functions in parallel, reusing shared components and continuous governance so each new process costs less than the last.

START YOUR AGENTIC JOURNEY

Tell us which workflow you want to tackle first. We'll confirm your use case fits the 30-day program and schedule your discovery session.
